

1. Project Overview

The **Coffee Shop Sales Dashboard** is designed using **Microsoft Excel** to analyze sales performance, customer behavior, and store performance. The dashboard provides a clear view of sales trends, product demand, and customer ordering patterns through interactive charts and filters.

2. Key Performance Indicators (KPIs)

The dashboard highlights the main business metrics:

- **Total Sales:** \$6,98,812.33
- **Total Footfall:** 149,116 customers
- **Average Bill per Person:** \$4.69
- **Average Orders per Person:** 1.44

These KPIs help quickly understand overall business performance and customer spending behavior.

3. Quantity Ordered by Hour

This chart shows how many orders are placed at different hours of the day.

The analysis indicates that **morning hours (around 8 AM – 10 AM)** have the highest order quantity, showing that coffee demand is highest during breakfast and early working hours.

4. Category Distribution Based on Sales

This section analyzes sales contribution by product categories such as **Coffee, Bakery, Coffee Beans, Drinking Chocolate, and Tea**.

The dashboard shows that **Coffee contributes the highest percentage of total sales**, followed by bakery and other beverage items.

5. Size Distribution Based on Orders

This pie chart shows the percentage of orders by cup size:

- **Regular size:** Highest share of orders
- **Large size:** Second highest
- **Small size:** Smaller share of orders

This insight helps understand customer size preferences for beverages.

6. Store Location Performance

The dashboard compares **footfall and sales across different store locations**:

- Astoria
- Hell's Kitchen
- Lower Manhattan

This helps identify which store generates the **highest revenue and customer traffic**, allowing better store performance evaluation.

7. Top 5 Products by Sales

This section highlights the **best-selling products**, including:

- Barista Espresso
- Brewed Black Tea
- Brewed Chai Tea
- Gourmet Brewed Coffee
- Hot Chocolate

This insight helps businesses focus on **high-demand products and improve product strategy**.

8. Orders by Weekday

The chart analyzes orders across different days of the week.

Sales are relatively higher during **weekdays such as Thursday and Friday**, indicating stronger demand during working days.

9. Dashboard Filters

The dashboard includes interactive filters that allow users to analyze data dynamically:

- **Month filter** (January–June)
- **Day filter** (Sunday–Saturday)

These filters help users explore sales performance for specific time periods.

10. Conclusion

The **Coffee Shop Sales Dashboard** transforms raw transaction data into meaningful insights using **Excel visualization tools, pivot tables, and interactive dashboards**. It helps businesses track performance, understand customer preferences, and make data-driven decisions to increase sales and improve operational efficiency.
